Yuchen Jin  
@Yuchenj_UW

Met a Meta AI researcher.

He studied Physics in China, came to the US for a PhD in Physics, and then fell in love with AI, despite never having studied computer science.

He watched Andrej Karpathy and Andrew Ng, bought a GPU, read every arXiv paper title daily, and dived into the ones that interested him. Eventually, he published a few first-author papers at top AI conferences without any supervisors, and later transferred to his university's AI lab.

You can just do things.
